Some examples to start...

This was the lead sentence of an article in an oncology journal:

“Adoptive cell transfer (ACT) immunotherapy is based on the ex vivo selection of tumor-reactive lymphocytes, and their activation and numerical expression before reinfusion to the autologous tumor-bearing host.”

Ask Yourself:

- Is this sentence easy to understand?
- Is this sentence enjoyable and interesting to read?
“In regards to evaluating consistency of the Accuracy Shooting at a Target test, we were unable to perform a consistency analysis based on how the accuracy was quantified in this study as only distance from the target was recorded without location therefore a distance of 100cm does not note the consistency of the shot.”
“These findings imply that the rates of ascorbate radical production and its recycling via dehydroascorbate reductatase to replenish the ascorbate pool are equivalent at the lower irradiance, but not equivalent at higher irradiance with the rate of ascorbate radical production exceeding its recycling back to ascorbate.”
After much **work** on my part, I translated this too...

- “These findings imply that, at low irradiation, ascorbate radicals are produced and recycled at the same rate, but at high irradiation, they are produced faster than they can be recycled back to ascorbate.”
A classic hallmark of “academic writing”: spunky verbs become clunky nouns...

“Adoptive cell transfer (ACT) immunotherapy is based on the ex vivo selection of tumor-reactive lymphocytes, and their activation and numerical expression before reinfusion to the autologous tumor-bearing host.”

“These findings imply that the rates of ascorbate radical production and its recycling via dehydroascorbate reductatse to replenish the ascorbate pool are equivalent at the lower irradiance, but not equivalent at higher irradiance with the rate of ascorbate radical production exceeding its recycling back to ascorbate.”
Principles of effective writing

“The secret of good writing is to strip every sentence to its cleanest components. Every word that serves no function, every long word that could be a short word, every adverb that carries the same meaning that’s already in the verb, every passive construction that leaves the reader unsure of who is doing what—these are the thousand and one adulterants that weaken the strength of a sentence. And they usually occur in proportion to the education and rank.”

-- William Zinsser in On Writing Well, 1976
Principles of effective writing

Today’s lessons:

1. Cut unnecessary words and phrases; learn to part with your words!

2. Follow: subject + verb + object *active voice*

3. Write with verbs: use strong verbs, avoid turning verbs into nouns, and don’t bury the main verb!
Don’t be afraid to cut!

- 1. Cut unnecessary words and phrases
Cut unnecessary words

Example:

“This paper provides a review of the basic tenets of cancer biology study design, using as examples studies that illustrate the methodologic challenges or that demonstrate successful solutions to the difficulties inherent in biological research.”

“This paper reviews cancer biology study design, using examples that illustrate specific challenges and solutions.”
Example:

“As it is well known, increased athletic activity has been related to a profile of lower cardiovascular risk, lower blood pressure levels, and improved muscular and cardio respiratory performance.”

→

“Increased athletic activity is associated with lower cardiovascular risk, lower blood pressure, and improved fitness.”

“Increased athletic activity lowers cardiovascular risk and blood pressure, and improves fitness.” (stronger level of evidence)
Cut unnecessary words

Hunt down and cast out all unneeded words that might slow your reader.

- Dead weight words and phrases (“as it is well known”, “as it has been shown”, “it can be regarded that”)
- Empty words and phrases (“basic tenets of”, “methodologic”)
- Long words or phrases that could be short (“muscular and cardiorespiratory performance”)
- Unnecessary jargon (“muscular and cardiorespiratory performance”)
- Repetitive words or phrases (illustrate/demonstrate; challenges/difficulties)
- Adverbs (very, really, quite, basically, generally)
## Long words and phrases that could be short...

<table>
<thead>
<tr>

<th>Crisp version</th>
</tr>
</thead>
<tbody>
<tr>
<td>A majority of</td>
<td>most</td>
</tr>
<tr>
<td>A number of</td>
<td>many</td>
</tr>
<tr>
<td>Are of the same opinion</td>
<td>agree</td>
</tr>
<tr>
<td>Less frequently occurring</td>
<td>rare</td>
</tr>
<tr>
<td>All three of the</td>
<td>the three</td>
</tr>
<tr>
<td>Give rise to</td>
<td>cause</td>
</tr>
<tr>
<td>Due to the fact that</td>
<td>because</td>
</tr>
<tr>
<td>Have an effect on</td>
<td>affect</td>
</tr>
</tbody>
</table>
Cut unnecessary words

- Be vigilant and ruthless

- After investing much effort to put words on a page, we often find it hard to part with them.

But fight their seductive pull...

- Try the sentence without the extra words and see how it’s better—conveys the same idea with more power
Example:

“Brain injury incidence shows two peak periods in almost all reports: rates are the highest in young people and the elderly.”

More punch→

“Brain injury incidence peaks in the young and the elderly.”
Blaise Pascal on the elegance in brevity:

“I have only made this letter rather long because I have not had time to make it shorter.” (“Je n'ai fait celle-ci plus longue que parceque je n'ai pas eu le loisir de la faire plus courte.”)

--Lettres provinciales, 16, Dec.14,1656

(though reference also attributed to St. Augustine, and Cicero....)
Use active voice

2. Follow: subject + verb + object
   \textit{(active voice!)}
Use active voice

“Subject verb object”
“Subject verb object”
“Subject verb object”
“Subject verb object”
or just...
“Subject verb”
Use active voice

The passive voice....

- Object-Verb-Subject or just Object-Verb
- Classic example: “Mistakes were made.”
- Passive verb = a form of the verb “to be” + the past participle of the main verb
- The main verb must be a transitive verb (that is, take an object).
Use active voice

Examples...

Passive:
My first visit to Boston will always be remembered by me.

Active:
I will always remember my first visit to Boston.

From: Strunk and White
"Cigarette ads were designed to appeal especially to children."

vs.

'We designed the cigarette ads to appeal especially to children.'
Use active voice

Passive:
General dysfunction of the immune system has been suggested at the leukocyte level in both animal and human studies.

Active:
Both human and animal studies suggest that diabetics have general immune dysfunction at the leukocyte level.
Use active voice

Passive:
Increased promoter occupancy and transcriptional activation of p21 and other target genes were observed.

→

Active:
We observed increased promoter occupancy and transcriptional activation of p21 and other target genes.
Use strong verbs

3. Write with verbs:
   • use strong verbs
   • avoid turning verbs into nouns
   • don’t bury the main verb
Use strong verbs

Verbs make sentences go!

Compare:
“Loud music came from speakers embedded in the walls, and the entire arena moved as the hungry crowd got to its feet.”

With:
“Loud music exploded from speakers embedded in the walls, and the entire arena shook as the hungry crowd leaped to its feet.”

Latter sentence from the novel: *Bringing Down the House*, Ben Mezrich
Use strong verbs

Verbs make sentences go!

Compare:
“Loud music came from speakers embedded in the walls, and the entire arena moved as the hungry crowd got to its feet.”

With:
“Loud music exploded from speakers embedded in the walls, and the entire arena shook as the hungry crowd leaped to its feet.”

Latter sentence from the novel: *Bringing Down the House*, Ben Mezrich
Don’t turn verbs into nouns

Don’t kill verbs by turning them into nouns.
Don’t turn verbs into nouns

Example:
During DNA damage, recognition of H3K4me3 by ING2 results in recruitment of Sin3/HDAC and repression of cell proliferation genes.
Don’t turn verbs into nouns

Example:
During DNA damage, recognition of H3K4me3 by ING2 results in recruitment of Sin3/HDAC and repression of cell proliferation genes.

→
During DNA damage, H3K4me3 recruits ING2 and Sin3/HDAC, which together repress cell proliferation genes.

Say exactly who does what to whom!
Don’t turn verbs into nouns

Weak verbs

Obtain estimates of

Has seen an expansion in

Provides a methodologic emphasis

Take an assessment of

Formerly spunky verbs transformed into boring nouns

estimate

has expanded

emphasizes methodology

assess
Don’t turn verbs into nouns

Provide a **review** of

Offer **confirmation** of

Make a **decision**

Shows a **peak**
Don’t bury the main verb

Keep the subject and main verb (predicate) close together at the start of the sentence...

- Readers are waiting for the verb!
Don’t bury the main verb

The case of the buried predicate...

One study of 930 adults with multiple sclerosis (MS) receiving care in one of two managed care settings or in a fee-for-service setting found that only two-thirds of those needing to contact a neurologist for an MS-related problem in the prior 6 months had done so (Vickrey et al 1999).
One study found that, of 930 adults with multiple sclerosis (MS) who were receiving care in one of two managed care settings or in a fee-for-service setting, only two-thirds of those needing to contact a neurologist for an MS-related problem in the prior six months had done so (Vickrey et al 1999).
Take-home messages

Effective scientific writing conveys an idea clearly and concisely.

Scientific writing should be easy and even enjoyable to read.

Three key principles of effective writing:

1. Cut all unnecessary words and phrases.
2. Use the active voice (subject-verb-object).
3. Write with verbs.
Practice Exercises

Let’s dissect this sentence:

“"It should be emphasized that these proportions generally are not the result of significant increases in moderate and severe injuries, but in many instances reflect mildly injured persons not being seen at a hospital.""
It should be emphasized that these proportions generally are not the result of significant increases in moderate and severe injuries, but in many instances reflect mildly injured persons not being seen at a hospital.

Can we use a more informative adjective than a pronoun? What’s important about “these” proportions?

More dead weight.
Ask yourself, what does the sentence loose without this qualifier?
Practice Exercises

- It should be emphasized that these proportions generally are not the result of significant increases in moderate and severe injuries, but in many instances reflect mildly injured persons not being seen at a hospital.

Watch out for awkward uses of “to be”

“The result of” ➔ Use positives.

“In many instances”
Practice Exercises

- Shifting proportions in injury severity may reflect stricter hospital admission criteria rather than true increases in moderate and severe injuries.
“The fear expressed by some teachers that students would not learn statistics well if they were permitted to use canned computer programs has not been realized in our experience. A careful monitoring of achievement levels before and after the introduction of computers in the teaching of our course revealed no appreciable change in students’ performances.”
“The fear expressed by some teachers that students would not learn statistics well if they were permitted to use canned computer programs has not been realized in our experience. A careful monitoring of achievement levels before and after the introduction of computers in the teaching of our course revealed no appreciable change in students’ performances.”
Many teachers feared that the use of canned computer programs would prevent students from learning statistics. We monitored student achievement levels before and after the introduction of computers in our course and found no detriments in performance.
Review of each center’s progress in recruitment is important to ensure that the cost involved in maintaining each center’s participation is worthwhile.
Practice Exercises

Possible rewrite:

We should review each center’s recruitment progress to make sure its continued participation is cost-effective.
