Memory constraint:

- (X⁽ⁱ⁾, Y⁽ⁱ⁾) observed as read-only stream
- Only keep *b* bits of state $Z^{(i)}$ between successive observations

Sparse linear regression in \mathbb{R}^d :

- $Y^{(i)} = \langle w^*, X^{(i)} \rangle + \varepsilon^{(i)}$
- $\|w^*\|_0 = k, k \ll d$

Memory constraint:

- (X⁽ⁱ⁾, Y⁽ⁱ⁾) observed as read-only stream
- Only keep *b* bits of state $Z^{(i)}$ between successive observations

If we have enough memory to **represent** the answer, can we also efficiently **learn** the answer?

How much data *n* is needed to obtain estimator \hat{w} with

$$\mathbb{E}[\|\hat{w} - w^*\|_2^2] \leq \varepsilon?$$

How much data *n* is needed to obtain estimator \hat{w} with

```
\mathbb{E}[\|\hat{w} - w^*\|_2^2] \leq \varepsilon?
```

Classical case (no memory constraint):

Theorem (Wainwright, 2009)

$$rac{k}{arepsilon}\log(d)\lesssim n\lesssim rac{k}{arepsilon}\log(d)$$

How much data *n* is needed to obtain estimator \hat{w} with

```
\mathbb{E}[\|\hat{w} - w^*\|_2^2] \leq \varepsilon?
```

Classical case (no memory constraint):

Theorem (Wainwright, 2009)

$$rac{k}{arepsilon}\log(d)\lesssim n\lesssim rac{k}{arepsilon}\log(d)$$

Achievable with $\tilde{O}(d)$ memory (Agarwal et al., 2012; S., Wager, & Liang, 2015).

(日)

5/11

How much data *n* is needed to obtain estimator \hat{w} with

```
\mathbb{E}[\|\hat{w} - w^*\|_2^2] \leq \varepsilon?
```

Classical case (no memory constraint):

Theorem (Wainwright, 2009)

$$rac{k}{arepsilon}\log(d)\lesssim n\lesssim rac{k}{arepsilon}\log(d)$$

With memory constraints b:

Theorem (S. & Duchi, 2015)

$$\frac{k}{\varepsilon}\frac{d}{b} \lesssim n \lesssim \frac{k}{\varepsilon^2}\frac{d}{b}$$

J. Steinhardt & J. Duchi (Stanford)

How much data *n* is needed to obtain estimator \hat{w} with

```
\mathbb{E}[\|\hat{w} - w^*\|_2^2] \leq \varepsilon?
```

Classical case (no memory constraint):

Theorem (Wainwright, 2009)

$$rac{k}{arepsilon}\log(d)\lesssim n\lesssim rac{k}{arepsilon}\log(d)$$

With memory constraints b:

Theorem (S. & Duchi, 2015)

$$rac{k}{arepsilon}rac{d}{b}\lesssim n\lesssimrac{k}{arepsilon^2}rac{d}{b}$$

Exponential increase if $b \ll d!$

(日)

How much data *n* is needed to obtain estimator \hat{w} with

```
\mathbb{E}[\|\hat{w} - w^*\|_2^2] \leq \varepsilon?
```

Classical case (no memory constraint):

Theorem (Wainwright, 2009)

$$rac{k}{arepsilon}\log(d)\lesssim n\lesssim rac{k}{arepsilon}\log(d)$$

With memory constraints b:

Theorem (S. & Duchi, 2015)

$$rac{k}{arepsilon}rac{d}{b}\lesssim n\lesssimrac{k}{arepsilon^2}rac{d}{b}$$

Some Information Theory

• Let $X \sim \text{Uniform}(\{\pm 1\}^d)$

July 6, 2015 8 / 11

(日)

Let *X* ∼ Uniform({±1}^d)

• Let $P_j(Z^{(1:n)})$ be distribution conditioned on J = j

- Let *X* ∼ Uniform({±1}^d)
- Let $P_j(Z^{(1:n)})$ be distribution conditioned on J = j
- Let $P_0(Z^{(1:n)})$ be distribution with Y independent of X

- Let *X* ∼ Uniform({±1}^d)
- Let $P_j(Z^{(1:n)})$ be distribution conditioned on J = j
- Let $P_0(Z^{(1:n)})$ be distribution with Y independent of X
- Assouad's method:

$$\mathbb{P}[J \neq \hat{J}] \geq \frac{1}{2} - \sqrt{\frac{1}{d} \sum_{j=1}^{d} D_{kl} \left(P_0(Z^{(1:n)}) \parallel P_j(Z^{(1:n)}) \right)}$$

- Let *X* ∼ Uniform({±1}^d)
- Let $P_j(Z^{(1:n)})$ be distribution conditioned on J = j
- Let $P_0(Z^{(1:n)})$ be distribution with Y independent of X
- Assouad's method:

$$\mathbb{P}[J \neq \hat{J}] \geq \frac{1}{2} - \sqrt{\frac{1}{d} \sum_{j=1}^{d} D_{kl} \left(P_0(Z^{(1:n)}) \parallel P_j(Z^{(1:n)}) \right)}$$

- Let *X* ∼ Uniform({±1}^d)
- Let $P_j(Z^{(1:n)})$ be distribution conditioned on J = j
- Let $P_0(Z^{(1:n)})$ be distribution with Y independent of X
- Assouad's method:

$$\mathbb{P}[J \neq \hat{J}] \geq \frac{1}{2} - \sqrt{\frac{1}{d} \sum_{j=1}^{d} D_{kl} \left(P_0(Z^{(1:n)}) \parallel P_j(Z^{(1:n)}) \right)}$$

• Key fact:
$$(Y, X_j)$$
 independent of $X_{\neg j}$ under P_j

- Let *X* ∼ Uniform({±1}^d)
- Let $P_j(Z^{(1:n)})$ be distribution conditioned on J = j
- Let $P_0(Z^{(1:n)})$ be distribution with Y independent of X
- Assouad's method:

$$\mathbb{P}[J \neq \hat{J}] \geq \frac{1}{2} - \sqrt{\frac{1}{d} \sum_{j=1}^{d} D_{kl} \left(P_0(Z^{(1:n)}) \parallel P_j(Z^{(1:n)}) \right)}$$

• Key fact: (Y, X_j) independent of $X_{\neg j}$ under P_j

Intuition: D_{k1} (P₀ || P_j) small unless Z stores info about X_j; need to store majority of X_j to make average D_{k1} small.

Focus on a single index $Z = Z^{(i)}$, with $\hat{z} = z^{(1:i-1)}$ fixed.

Focus on a single index $Z = Z^{(i)}$, with $\hat{z} = z^{(1:i-1)}$ fixed.

Proposition

For any 2,

$$D_{kl}(P_0(Z \mid \hat{z}) \parallel P_j(Z \mid \hat{z})) \leq 4\delta^2 \underbrace{I(X_j; Z \mid Y, \hat{Z} = \hat{z})}_{I(X_j; Z \mid Y, \hat{Z} = \hat{z})}$$

Solve $\ell^1\text{-}\text{regularized}$ dual averaging problem (Xiao, 2010), $\lambda\gg$ 1:

$$w^{(i)} = \operatorname{argmin}_{w} \left\{ \langle \theta^{(i)}, w \rangle + \lambda \sqrt{n} \|w\|_{1} + \frac{1}{2\eta} \|w\|_{2}^{2} \right\},\$$

$$\theta^{(i)} = \sum_{i'=1}^{i-1} x^{(i')} (y^{(i')} - \langle w^{(i')}, x^{(i')} \rangle).$$

Hard part: determine support of $w^{(i)}$.

Solve $\ell^1\text{-}\text{regularized}$ dual averaging problem (Xiao, 2010), $\lambda\gg$ 1:

$$w^{(i)} = \operatorname{argmin}_{w} \left\{ \langle \theta^{(i)}, w \rangle + \lambda \sqrt{n} \|w\|_{1} + \frac{1}{2\eta} \|w\|_{2}^{2} \right\},\$$

$$\theta^{(i)} = \sum_{i'=1}^{i-1} x^{(i')} (y^{(i')} - \langle w^{(i')}, x^{(i')} \rangle).$$

Hard part: determine support of $w^{(i)}$.

Solve $\ell^1\text{-}\text{regularized}$ dual averaging problem (Xiao, 2010), $\lambda\gg$ 1:

$$w^{(i)} = \operatorname{argmin}_{w} \left\{ \langle \theta^{(i)}, w \rangle + \lambda \sqrt{n} \|w\|_{1} + \frac{1}{2\eta} \|w\|_{2}^{2} \right\},\$$

$$\theta^{(i)} = \sum_{i'=1}^{i-1} x^{(i')} (y^{(i')} - \langle w^{(i')}, x^{(i')} \rangle).$$

Hard part: determine support of $w^{(i)}$.

• Need to distinguish $|\theta_j| \ge \lambda \sqrt{n}$ (signal) from $|\theta_j| \approx \sqrt{n}$ (noise)

Solve ℓ^1 -regularized dual averaging problem (Xiao, 2010), $\lambda \gg 1$:

$$w^{(i)} = \operatorname{argmin}_{w} \left\{ \langle \theta^{(i)}, w \rangle + \lambda \sqrt{n} \| w \|_{1} + \frac{1}{2\eta} \| w \|_{2}^{2} \right\},$$

$$\theta^{(i)} = \sum_{i'=1}^{i-1} x^{(i')} (y^{(i')} - \langle w^{(i')}, x^{(i')} \rangle).$$

Hard part: determine support of $w^{(i)}$.

- Need to distinguish $|\theta_j| \ge \lambda \sqrt{n}$ (signal) from $|\theta_j| \approx \sqrt{n}$ (noise)
- Can use count-min sketch, memory usage $\approx \frac{d \log(d)}{\lambda^2}$

Solve ℓ^1 -regularized dual averaging problem (Xiao, 2010), $\lambda \gg 1$:

$$w^{(i)} = \operatorname{argmin}_{w} \left\{ \langle \theta^{(i)}, w \rangle + \lambda \sqrt{n} \|w\|_{1} + \frac{1}{2\eta} \|w\|_{2}^{2} \right\},$$

$$\theta^{(i)} = \sum_{i'=1}^{i-1} x^{(i')} (y^{(i')} - \langle w^{(i')}, x^{(i')} \rangle).$$

Hard part: determine support of $w^{(i)}$.

- Need to distinguish $|\theta_j| \ge \lambda \sqrt{n}$ (signal) from $|\theta_j| \approx \sqrt{n}$ (noise)
- Can use count-min sketch, memory usage $\approx \frac{d\log(d)}{\lambda^2}$
 - \implies regularization decreases computation; seen before in ℓ^2 case (Shalev-Shwartz & Zhang, 2013; Bruer et al., 2014)

Discussion

Summary:
