

Subject Index

- 1 in 4 youths abused, 16, 55, 91–94
- abcnews.com, 54
- accuracy, 12, 211–213
- addiction to the World Wide Web, 54
- addresses, street, 48–52
- Africa, number of countries in, 67, 268
- age adjustment, 13, 32
- ages, *see* guessing ages
- aggregation, 44
- AIDS, 160, 164
- air bags, 211
- American Statistician, *see* magazines
- amoebas (example of logarithms), 33
- analysis of variance, 259, 261
- anchoring, 67
- animals, 35–37
- arcsine rule, 245–246, 275
- artifacts in maps, 13–14, 274
- assignments, *see* homework
- average absolute error, 12
- average student, 24

- babies, *see* births
- barroom brawls, 156
- baseball, 45, 109–111, 151, 270
 - length of World Series, 109–111
 - hypothesis test, 132–133
- basketball, 135, 213, 253, 269, 271
- Bayesian statistics, 215–221, 274
- before/after study, *see* observational study
- Benford’s law of first digits, 52–54, 132, 268
 - data, 53
 - hypothesis test, 132
 - worksheet, 52
- Berkeley, California, 150
- best of the best, 4
- beta distribution, 215
- betting, 213, 274
- bias, 13, 25, 50, 54, 56–57, 74, 121–122, 130, 268
 - selection, 154–156
 - distinguishing from other sorts of bias, 154–155
 - puzzles, 155–156
- binomial distribution, 122–123, 130–132, 239
- biology, 35–37, 43–44, 105–106
- birthday problem, 238–239, 241
- births
 - boys or girls, 105–106, 122–123, 169
 - twins, 106
- bivariate normal distribution, 30
- blackboard, 19
- blindness, *see* experiments
- body measurements, 43–44
- Boston Globe, *see* newspapers
- Boston Herald, *see* newspapers
- boys, *see* births
- branching processes, 250
- Brier score, 211–212, 274
- Buffon’s needle, 243, 253
- Buffon’s noodle, 186
- buzz groups, 187

- calibration
 - of age guesses, 12
 - of point spreads, 213
 - of probability estimates, 211–212, 274
 - of subjective intervals, 274
 - of uncertainty intervals, 216–219
- cancer rates, 13–14, 265, 274
 - Bayes-estimated map of highest, 216
 - Bayesian inference for, 215
 - map of highest, 14
 - map of lowest, 15
 - simulation, 219–220

- candy weighing, 121–122
 - data, 122
 - photo, 170
- card games, why we do not use as
 - probability examples, 104
- case studies, 255–264, 275
 - helicopter design, 259–264
 - quality control, 258–259
- categorical variables, 20–21
- causation, 44
- Census adjustment, 235
- Chance, *see* magazines
- Chance News, 188
- chi-square test, *see* hypothesis testing
- Chicago Sun-Times, *see* newspapers
- China, sex ratio of births, 123
- church attendance, as categorical or
 - continuous, 21
- class participation, 172, 265, 273
- clinician's illusion, 155
- cluster sampling, *see* sampling
- Clusterville, 226–228
 - worksheet, 227
- coalitions, 111, 270
- coffee tasting, 70–72
- cognitive illusions, 268
- coin flipping
 - and spinning, 115–120
 - arcsine law, 245–246
 - data, 118
 - for random numbers, 224–225
 - physical model, 115–120
 - probability of 6 straight heads
 - in 100 flips, 108
 - real and fake sequences, 106–108, 269
 - simulations, 108
- collecting data, *see* data collection
- College Teaching, *see* magazines
- community service, *see* survey
- conditional probability, 112–115, 270
 - lie detection, 114–115, 163
 - Monty Hall, 113, 270
 - three cards, 112–113
 - three prisoners, 113–114, 270
- confidence intervals, 124–129, 225, 271
 - basketball shooting, 135
 - coverage, 127–129
 - graph, 128
 - for regression coefficients, 138
 - golf putting, 127, 144
 - graph, 144
 - guessing ages, 124–125
 - inflatable globe, 125–126
 - memory quizzes, 134
 - graph, 134
 - noncoverage, 129
 - graph, 129
 - poll differentials, 126
 - subjective, 205, 216–219
 - United Nations experiment, 125
- Congressional elections, 111
- Consumer Price Index, 31
- contingency table, 27–28
- continuous variables, 20–21
- correlation, 43–45, 47
 - and aggregation, 44
 - and causation, 44–45
- coupling (technique in probability theory), 251
- course packet, 189
- course plan, 189–199
- coverage, *see* confidence intervals
- crime, 150, 151, 162, 268, 270, 273
- cubes (example of logarithms), 33
- Daily Californian, *see* newspapers
- data cleaning, 42
- data collecting by students
 - body measurements, 43–44
 - golf putting, 146
- data collection, 11
 - basketball shooting, 135
 - biased coins and dice, 116–118
 - candy weighing, 121–122
 - class survey, 17–18, 223–224
 - coffee tasting, 70–72
 - family size, 56–57
 - group projects, 178–185

- guessed exam scores, 25–27
- guessing ages, 11
- handedness, 17, 21
- helicopter design, 259–264
- inflatable globe, 125–126
- memory quizzes, 133–134
- soda consumption, 22
- spaghetti, 185–186
- telephone numbers, 48–52
- United Nations experiment, 65–68
- data display, 24–28, 266, 272
- data dredging, *see* multiple comparisons
- deception
 - as ethical issue, 161
 - confidence intervals demonstration, 129
 - United Nations experiment, 65–68
- decision analysis, 204–215, 274
- decision tree, *see* probability tree
- depression, 96
- descriptive statistics, 19–37
- design of experiments, *see* experimental design
- details, why they are important, 169
- dice
 - for random numbers, 48–52, 104–105
 - loaded, 115–120
- dice games, why we do not use as probability examples, 104
- discrete data, 28
- displaying graphs on the blackboard, 19
- distribution, 20–22
 - Benford's law, 53
 - beta, 215
 - binomial, 122–123, 130–132, 239
 - bivariate normal, 30
 - continuous with a spike at zero, 21, 23
 - gamma, 220
 - geometric, 239
 - heights, 29
 - hypergeometric, 70, 132
 - length of World Series, 110, 133
 - negative binomial, 239
 - normal, 28–30, 105, 145, 205, 207
 - Poisson, 105, 220, 243–244, 253
- divorce, 157–159
- Doubs, France, 29, 30
- earnings, *see* height and income
- economic indexes, 267
- economics, 31–32, 39–41, 99–103, 138–141, 207–211, 213, 267, 274
- Economist*, *see* magazines
- education and public opinion, 27–28
- eggs, number produced in 1965, 218
- elections, 111, 126, 188, 270, 271
- elephant, metabolic rate of, 35
- estimating a big number, 14–15
- ethics, 159–164
 - adjusting for exam scores, 162–163
 - and randomized experiments, 160–161
 - background information, 162
 - misleading information, 163
 - privacy and confidentiality, 163–164
 - racial discrimination, 161–162, 273
 - randomized experiments, 159–160
- ethnicity, 161–162
- Euler's formula, 242
- exam
 - actual vs. guessed scores, 25–27
 - as teaching tool, 175
 - correcting for guessing, 162–163, 273
 - correlation, 30, 46
 - number of pages written, 44–45
 - psychometric study, 142–143
 - randomizing, 68–69, 142
 - scatterplot, 29, 30

- scoring probabilistic answers, 211–212
- Excel, why we don't let students use, 179
- exit poll, 55–56
- expectation, *see* probability
- experimental design, 259–264
 - graphs, 263
- experiments, 65–72
 - biased coin, 115–120
 - blindness, 161–162
 - embedded in surveys, 68
 - ethical issues, 159–161
 - helicopter design, 259–264
 - IV fluids for trauma victims, 86–91
 - nonrandomized, 86–91
 - prayer, 136–137
 - protocol, 159–160
 - surgeons and music, 17
 - taste test, 69–72
 - United Nations, 65–68
 - using exams, 68–69, 142–143
- extrapolation, 20
- fake data, 3
- false positives, 114–115
- family size, 56–57
 - data from students, 57
- favorite activities, 4
- feedback, 188, 273
- fires, 158
- first digits, *see* Benford's law
- first week of class, 11–18, 189
- football, 213
- forecasting, 212–213
- friends, popularity of, 155
- Gallup poll, 28, 126, 266
- gambler's ruin, 123–124, 240
- gambling, 213, 239, 274
 - lotteries, 108–109
 - roulette, 123–124
 - systems, demonstration that they don't work, 123–124
- gamma distribution, 220
- GDP, *see* Gross Domestic Product
- generating functions, 250, 253
- geometric distribution, 239
- geometry, 145
- getting started, 167–171
- girls, *see* births
- globe, inflatable, 125–126, 130, 271
- golf putting
 - data and fitted model, 144, 146
 - diagram, 145
 - example of confidence intervals, 127
 - modeling, 143–146
- government statistics, 232, 274–275
- grade point average (GPA), 31
- graphics, 24–28, 266, 272
- Gross Domestic Product, 31
- group activities, 11, 32, 48–52, 57–65, 106–107, 114, 127–129, 135, 148–154, 167, 173–176, 205–207, 219–220, 223–224, 228, 237–238, 256–257
 - photos, 169, 170, 173, 174
- guessing ages, 11–13, 124–125, 265
 - confidence intervals, 124–125
 - data, 13
 - hypothesis tests, 130
 - photo, 174
 - worksheet, 12
- guessing exam scores, 25–27
- Gulf War, 149
- hand span and height, 43–44
- handedness, 21, 265, 266
 - as categorical or continuous, 21
 - association with age of death, 156, 272
 - data from students, 22
 - guessed distribution, 22
 - worksheet, 17
- heart bypass surgery, blindness in, 161–162
- height
 - and hand span, 43–44

- and income, 39–41, 138–141
 - data, 41
 - Stata log file, 42, 139, 141
- conscripts, apparently bimodal, 30
- men and women, not bimodal, 29, 266
- men's exaggeration of, 130
- parents and children, 46
- helicopter design, 259–264, 276
 - data, 261
 - instructions, 260
- hierarchical models, 220–221, 259
- histogram, 20–22
 - candy weighing, 122
 - family size, 57
 - first digits, 53
 - handedness, 22
 - heights, 30
 - soda consumption, 23
 - student guess, 22
 - United Nations experiment, 68
- Holocaust, 55
- homework, 1, 78–79, 157, 176, 243–244
- hot hand in basketball, 253
- how to do it, 237–238
- how to use this book, v, 1–5, 167–175
- Hungarian maps, 251–252
- hypergeometric distribution, 70, 132
- hypothesis testing, 129–133
 - chi-square test
 - baseball World Series, 132–133
 - Benford's law, 132
 - golf putting, 145–146
 - guessing ages, 130
 - heights of men, 130
 - inflatable globe, 130
 - random exams experiment, 69
 - taste testing, 132
 - telephone book sampling, 131–132
 - United Nations experiment, 130–131
- illegal aliens, 99–103
- income, see height and income
- India, sex ratio of births, 123
- ineligible sampling units, 54
- infant deaths, 16
- inflatable globe, see globe
- inflation, 31, 213, 267, 274
- instructions
 - coffee tasting project, 71
 - helicopter design, 260
 - independent projects, 179, 180
 - probability projects
 - arcsine law, 245–246
 - branching processes, 250
 - Markov chains, 247–251
 - martingales, 249–250
 - random permutations, 251–252
 - sampling and inference, 232–233
 - sampling project, 59–62
 - statistical literacy assignment, 80, 81
- Internet survey, 54
- interpolation, 20, 34
- IQ, 135–136, 219, 271
